*Investment Report, September 2011*

Dear Friends,

**The month of September 2011 saw the benchmark indices, the BSE Sensex and CNX Nifty losing 1.34% and 1.15% respectively even as the CNX Midcap index lost 2.75%. This muted performance of the headline indices does not fully capture the sharp increase in volatility in the Indian equity markets on the back of adverse global news flows, primarily from the Euro zone.**

In contrast to a sharp sell off in MSCI Asia ex Japan index of over 10% and MSCI World index return of a negative 6% for September 2011, India has substantially outperformed its global peers during the month. The FII's have pulled out a modest USD 100 million over the month and USD 300 million since January 2011, even as insurance companies bought USD 500 million in Indian equities over September taking their net purchase to over USD 4 billion over the calendar year. The domestic mutual funds were net sellers to the extent of around USD 200 million over the month of September and have been net buyers to the tune of USD 1.2 billion since January 2011.

Last few weeks of increasing volatility in the global financial markets can be largely attributed to the uncertainty regarding Greece receiving its October installment of € 8 billion, part of the IMF led Greek bailout package, which if not granted, could then trigger a subsequent sovereign default by Greece on its debt obligations, an event with wide ranging global ramifications.

On the domestic macro front, the south west monsoon picked up strongly in August and September after a weak July and the cumulative rainfall for the week ended September 28th, 2011 clocked an impressive 2.3% above its Long Period Average, well above the IMD forecast. This would drive a strong rural demand in FY12 and farm incomes could go up by around 11% in the kharif harvest (which accounts for 7% of GDP). This impressive rise in farm incomes will be over the massive surge in farm incomes of over 30% last year. A bumper winter rabi crop could be on the cards due to strong monsoon led inflows in the key rivers that water the wheat fields in North India.

The sticky and elevated inflation and moderating industrial growth are the key challenges facing the Indian economy. Wholesale Price Index (WPI) Inflation for the month of August 2011 clocked 9.78%, well above the July 2011 print of 9.22%. The non-food manufactured products inflation referred to as core inflation remained elevated at 7.79% as against the July reading of 7.49%, indicating the presence of a robust demand scenario in the economy, enabling the input price increases to be passed on by manufacturers to the end consumers in many product categories. As expected, the RBI maintained its anti-inflationary stance to deliver a 25 bps rate hike in its mid-quarter monetary policy, taking the repo rate to 8.25%. Consequent to the above increase in the repo rate, the reverse repo rate under the liquidity adjustment facility (LAF) stood automatically adjusted to 7.25% and the marginal standing facility (MSF) rate to 9.25%.

The Index of Industrial Production (IIP) for the month of July, 2011 moderated to a growth rate of a muted 3.3%, far below the July 2011 consensus of over 6% growth. The negative surprise on the IIP number can be explained by the performance of the volatile capital goods sector which saw a huge decline of 15% compared to a healthy growth of around 38% year on year recorded in June 2011.

The impact of "Operation Twist", launched by the US Federal reserve, on the Indian markets has been mixed. Lower global commodity prices would lead to lower imported inflation in the medium term (with Brent crude correcting close to 10% in September), as India imports almost 80% of its oil requirements. The global metals such as zinc and aluminium are at their 10 month low, even as copper has been trading at a 15 month low. However, in the near term, the benefits of falling global commodity prices are capped as the Indian rupee has weakened close to 10% over the last 6 weeks, on global risk aversion and on concerns stemming from the possible slow down of capital flows and a widening current account.

Going forward, we could see the Indian economy in a moderately slower growth trajectory, even though there is a strong floor to the FY 2012 Indian GDP growth at around 6.5%, even if the US economy finds itself into double dip territory. The strong growth in farm incomes could broad base rural discretionary spends, benefiting a clutch of product categories and supporting the demand.

With the global growth expected to slow down sharply in 2012 and 2013, India along with China could emerge as the key engines of economic activity. Even with a moderately slowing Indian economy, the growth differential as compared to the western world, still make India a key investment destination.

The Indian equity market is reasonably valued at less than 13 times one year forward earnings multiple as against the long term average of 14 times forward and present an attractive opportunity for a long term investor with a 2 to 5 year view.

**Saravana Kumar**  
Chief Investment Officer

The month of September 2011 saw the benchmark 10 year Government security (G-sec) starting the month at 8.32% and trading in a tight range of 8.28-8.36% during the month and hardening to 8.44% towards the end of the month as the government announced its second half borrowing calendar. This 12bps hardening can be attributed to the additional borrowing of close to ₹52,900 crores to be completed in the second half of FY 2012, taking the second half borrowing to ₹2,20,000 crores.

The corporate bond yields took the cue from the G-sec yields as they hardened by 19 bps in September 2011 from 9.39% to 9.58%. As a consequence, the corporate bond spread over the 10 year G-sec was in the range of around 95-100 bps over the month of September.

The liquidity position was benign in first fortnight to average a negative ₹40,000 crores, within the RBIs comfort zone of a negative 1% of NDTL (Net Demand Time Liabilities) and subsequently tightened to around a negative ₹65,000 crores on the back of advance tax outflows from the system.

The Government borrowings for September 2011 stood at ₹22,000 crores to complete the first half planned borrowing number of ₹2,50,000 crores. This reduced G-sec supply for the month and heightened global uncertainties prevented the G-sec yields from further hardening, in response to higher headline inflation and consequent RBI tightening.

The Wholesale Price Index (WPI) Inflation for the month of August 2011 clocked 9.78%, marginally above the consensus estimate of around 9.65% and well above the July 2011 print of 9.22%. The non-food manufactured products inflation referred to as core inflation remained elevated at 7.79%, as against the July reading of 7.49%. The primary articles inflation rose sharply in August 2011 to 12.58%,

as against the July reading of 11.3%. The non-food primary articles, which includes fibres, oilseeds and minerals, registered an inflation rate of 17.8% in August as against 15.5% in July. In the minerals category, inflation eased to 23.4% year on year as against 25% in July 2011.

The only silver lining to the gloomy headline inflation picture stems from the fact that the year on year inflation for June 2011 was revised higher by only 7 bps to 9.51% from earlier provisional estimate of 9.44%. This extent of upward revision is negligible compared to the steep revisions to the provisional estimates of around 50-100 bps seen in the recent past.

With the September 2011 headline inflation expected to remain elevated, the RBI would be constrained to keep the anti-inflationary stance intact in the second quarter monetary policy on October 25th 2011. The RBI stance as well as the increased second half borrowing would put pressure on the benchmark 10 year G-sec, as we could see it breaching the 8.50% in October and trading in an 8.40-8.60 % band for the month.

## Market Outlook - Equity

FundAssure, Investment Report, September 2011

**TATA**  
**AIG**  
L I F E

*A new look at life*

The Indian equity market has been among the best performing emerging market over the month of September 2011 with the Benchmark indices BSE Sensex and CNX Nifty losing just 1.34 % and 1.15% respectively as against a sell off of over 10% in the MSCI Asia ex Japan index and over 6% fall in the MSCI World index during the same period. Post a relatively strong September, Indian equity market has corrected the earlier steep underperformance with the Asian peers, with the BSE Sensex and CNX Nifty losing close to 20% on a local currency basis, similar to MSCI Asia ex Japan, calendar year to date.

September 2011 saw FII net outflows of USD 100 million, year to date outflows of approximately USD 300 million, whereas the Insurance companies have been net buyers to the tune of USD 500 million in September and have invested over USD 4 billion in Indian equities since January 2011. In contrast to the insurance companies, the domestic mutual funds have been net sellers to the tune of USD 200 million in September, their overall inflow for the year standing at USD 1.2 billion. The FII outflows from Indian equities, calendar year to date, is a fraction of the outflows from Taiwan at over USD 10 billion and Korea at over USD 6 billion over the same period.

With the second quarter earnings season set to kick in, there is some uncertainty surrounding the earnings outlook of the leading corporate making up the indices. Over the last 18 months, the Indian equity market has seen a slew of earnings downgrades, with estimates for FY 2012 and FY 2013 cut by around 8% and 10% respectively from peak levels. With increasing global uncertainties and a moderating domestic economy, investors are looking at an earnings growth of around 15% for FY 2012E. There is a possibility of further downgrades to the Indian earnings if global macro situation substantially worsens from current levels and the US economy finds itself in double dip territory.

Going forward, it is expected that robust rural demand from increased farm incomes following an excellent south west monsoon, could support the Indian GDP growth in a weak global growth environment. This could offset the sharp moderation expected in export led growth due to the global slowdown and provide a strong floor to the Indian GDP growth at around 6.5% in FY 2012 in an unlikely situation of a US double dip scenario.

When compared to other Asian emerging economies with greater trade dependence on Europe and US, India could withstand global economic shocks better and bounce back faster. This provides the Indian equity markets with a chance to outperform global peers, given the fact that the Indian corporate earnings have a more balanced growth profile than their Asian peers.

The equity markets seem to offer value, as on a one year forward PE basis, the CNX Nifty is almost at a 20% discount as compared to the last 5 years average forward PE. Even the ratio of the market capitalization to the GDP is significantly below the 5 year average.

In the near term, the immediate trigger for the sentiment to improve would come from a pause in the rate hike cycle by the RBI, as well as some short term resolution to the Greek debt crisis through the continued bailout assistance and an expansion of the European financial stability fund, in order to minimize contagion risks in the Euro zone.

Given the fact that India still offers a growth differential as compared to the slowing western economies, we believe that the Indian equity market offers an attractive entry point for a long term investor with a 2-5 year view.

**Disclaimer**

1. The fund is managed by Tata AIG Life Insurance Company Ltd. (hereinafter the "Company").
2. Past performance is not indicative of future performance. Returns are calculated on an absolute basis for a period of less than (or equal to) a year, with reinvestment of dividends (if any).
3. All investments made by the Company are subject to market risks. The Company does not guarantee any assured returns. The investment income and price may go down as well as up depending on several factors influencing the market.
4. Every effort is made to ensure that all information contained in this publication is accurate at the date of publication, but no responsibility or liability in respect of any error or omission is accepted by the Company.
5. Tax benefits are as per the Income Tax Act, 1961 and are subject to amendments made therein from time to time.
6. Please know the associated risks and the applicable charges from your Insurance agent or the intermediary or policy document of the Insurer.
7. Various funds offered under this contract are the names of funds and do not, in any way, indicate the quality of the plans, their future prospects & returns.
8. Premium paid in ULIPs are subject to Investment risks associated with capital markets & the NAV of the units may go up or down based on the performance of the fund and factors influencing capital markets & the insured is responsible for his/her decision.
9. ULIP products are different from traditional Life Insurance products and are subject to risk factors.
10. Interest Rate Sensitivity  
Less than 3 year duration - Low  
3 to 10 years duration - Medium  
more than 10 years duration - High
11. Shading indicates the general representative nature of the portfolio to a particular style or cap".
12. Whilst every care has been taken in the preparation of this document, it is subject to correction and markets may not perform in a similar fashion based on factors influencing the capital and debt markets; hence this review note does not individually confer any legal rights or duties.
