Dear Friends,

The month of August 2010 witnessed the culmination of a robust first quarter earnings season for the Indian markets, progress of monsoons at a healthy pace, tabling of the proposed Direct Tax Code (DTC) bill in the Parliament as well as key policy announcements from the US Fed. The month ended with the declaration of the first quarter GDP growth numbers.

FY11 began on a positive note, with Q1 GDP growth at 8.8% YoY. The growth was led by manufacturing (up 12.4% YoY) trade, hotels, transport and communication (together up 12.2% YoY), and mining and quarrying (up 8.9% YoY). This was the highest quarterly growth in the last 10 quarters.

Core sector growth increased to 3.9% in July 2010 compared to 3.6% in June 2010. The six core industries have a combined weight of 26.7% in the Index of Industrial Production (IIP) and serve as a useful lead indicator of manufacturing activity.

The first quarter earnings were a mixed bag. Aggregate earnings growth for the Sensex at 21% YoY was largely in line with expectations. Earnings growth in the broad market slowed down even as earnings for the both the narrow and broad market reached a new peak. The Sensex EPS estimate reflects an earnings growth estimate of 23% in FY11.

The benchmark indices, Sensex and the Nifty were trading flat in August 2010 with a gain of less than 1% over the July close, even as the broader CNX Midcap index was up by over 3%.

The Direct Tax Code (DTC) was tabled in Parliament. The DTC is expected to widen tax base, remove multiplicity of tax rates and provide a framework for a stable tax regime which could improve the tax/ GDP ratio from the current 10.3%.

The South West monsoon picked up momentum, which narrowed the overall monsoon deficiency to just 2% of the long period average as of August 25th. The monsoons are crucial to revive the agricultural growth, increase rural incomes and cool down food inflation.

The US Fed revised its Q2 GDP numbers sharply from 2.4% to just 1.6% and pruned the Q3 and Q4 estimates indicating a slowdown in the US economy grappling with weak economic data. It also decided to reinvest the principal repayments of mortgage backed securities into treasury to ease liquidity. The muted growth in US is in sharp contrast to the robust Q2 GDP growth in Euro zone particularly Germany on the back of soaring exports helped by a weak euro. The markets having traded in a narrow range in August look to the cues from the RBI during the mid-quarter policy meet on 16th Sep 2010 and the Fed's stance on a possible quantitative easing to revive the US economy.

Chief Investment Officer

INVESTMENT PHILOSOPHY

Investment Objective : To Generate a superior and consistent risk adjusted investment returns to meet investors long term objective and return expectation.

The foundation of the investment philosophy rests on the following tenets:

- ◆ We have a long term view based on fundamental research to meet our investor's long term objectives
- ◆ We follow a well defined research process & methodology with rigour
- ◆ We have a largely bottom up stock picking to identify quality stocks at reasonable valuations
- ◆ We follow the same philosophy used for Balance sheet and third party investment

These make us well suited for insurance and pension fund investment.

DEBT MARKET OUTLOOK

The benchmark 10 year G-Sec recorded a high of 8.06% during the month as there were concerns of excessive supply and expectations of another rate hike in the midterm policy review on 16th Sep 2010.

Annual inflation for the month of July fell to 9.97% from 10.55% for the previous month. Higher base effect along with lower food price resulted in lower than estimated inflation.

Food inflation is expected to cool on the back of good monsoons. Country's overall seasonal rainfall deficiency over Long Period Average(LPA) reduced from 5% to 2% as the All India rainfall during August was 3% above the LPA with excess rainfall activity over northwest India.

This strong rainfall has resulted in an increase in sowing area of most Kharif crops. Pulses have seen a significant increase in area under cultivation, while the area under rice cultivation has improved. Around 88% of the normal area under kharif crops was sown up to 20th August 2010 against 80% during the same period last year. Area sown under all kharif crops taken together stood at approx.92mn hectares, a 10% increase over approx.84mn hectares in the corresponding period of 2009.

It is expected that the increase in farm GDP (FY11 estimate is approx. 4%) will further boost rural demand and spur private consumption to above 6%, which will lead to the economy growing above 8% in FY 11.

For the 81 important water reservoirs in parts of the country, total live storage has increased by 27% increase from last year's levels. This should boost rabi (winter) crop as well, which is more irrigation dependent.

Credit growth is expected to be robust with investment and consumption growing at a steady pace.

Inflation is likely to remain at sticky levels next month and beyond, even as food price inflation seems to be trending lower, due to the elevated levels of fuel and manufacturing inflation. This is likely to continue till Nov 2010 when the base effect will kick in.

The 10 year is likely to trade in a range between 7.70 and 8.10 with a bias to the higher end of the range as we approach the Mid-quarter policy review.

it is possible that the policy action on Sep 16th would just raise reverse repo rate by 25 bps to 4.75% leaving the repo rate unchanged at 5.75% This will further compress the overnight interest rate corridor to 100 bps, with RBI already shrinking it by 25 bps in its July 27 policy. Any hike in CRR may depend on the improvements in liquidity situation, which may come only if and when the bulky government spending comes.

EQUITY MARKET OUTLOOK

August 2010 saw the progress of the first quarter earnings season. The equity markets traded flat with the benchmark indices Sensex and the Nifty registering a gain of less than 1% over the July 2010 close even as the broader CNX Midcap Index registered a gain of over 3% over the same period.

The earning season threw up its surprises, though it was largely along expected lines on an aggregate basis. Indian market is at reasonably fair valuations with its absolute multiples trading at slightly above their historical averages. The market appears richly valued if we look at the dividend yield metric on a historical basis; this is primarily due to a lower payout ratio, as Indian companies seem to be ploughing back earnings to invest for future growth. The broad market appears distinctly more attractive than the narrow market as the multiples are low and the earnings prospects look good.

The relative valuation measures seem to be above historical averages, although on Price to Book basis, Indian equities are below their average since 2003. MSCI India is currently trading at a 12 month forward PE of 17, reflecting a 43% premium to MSCI Asia ex Japan's forward earnings multiple, compared to a historical average of 17%.

This relative valuations compared to other Asian markets can be attributed to India's demographic dividend and a shift in the labor force from low-productivity agriculture to higher-productivity industry and services sectors. This should lead to 8% annualized GDP growth over the next decade provided there is enough capacity addition in upgrading labor force skills, significant infrastructure investments and continued reforms. At the micro level, operating leverage, pricing power and healthy balance sheets should help Indian companies sustain their earnings over the next few years to justify the premium relative valuations.

The benchmark indices have consolidated in a rather narrow range over the last 6 months. The markets could break the range on liquidity flows in the short term, (which is closely linked to global risk appetite) and as markets fully discount FY 11 earnings going forward.
